Introduction

You know those items you throw away every day? Well do you ever recycle them, or reuse them?

There are so many things you can do with the trash you throw away and today you will learn how.

Task

First you will learn how to reduce, reuse, and recycle items you use at school. Then you will apply it to your homes and communities and then share with the class how you can do it out in the world.

You will create crafts with the items you found that you can recycle.

- You will learn how to reduce, reuse, and recycle

Process

1. Read about reducing items in school you use and discuss how to do so with fellow students
2. Reuse as many items that you can in order to help the school
3. Find things that can't be reduced or reused and recycle those items

Resources

WebQuest:

Evaluation

Rubrics, statements of measurements, points, etc.

Beginning 1	Developing 2	Exemplary 4
Plan is non existent	Plan has started, but not complete	The plan is fully complete nothing missing
No reasons	Little reasons given	All reasons are well explained
No homework is complete	Some of the homework is complete	All of the homework is complete

Conclusion

Now that you all know how to reduce, reuse, and recycle you can all go out and help clean up the environment!

Every little bit helps and don't forget that.

Now you are going to be assigned a little homework project you need to take home to your parents. You're going to go home and find a website that has to do with recycling, and then you are going to write down and bring in one thing you learned that was new about recycling that can help out the school and community and share it with the class.
